

Vintage Stone™ Heritage™ Series

The tumbled Vintage Stone™ product mixture delivers scale, color and modular design options for a unique pavement expression. The truly random pattern of Vintage Stone™ expands an infinite number of impression possibilities making it one of the most popular design tools for pavements today. The tumbled Heritage™ texture and the Giant Vintage Stone™ open up the scale for more elegant designs.

COMPOSITION AND MANUFACTURE

Vintage Stone™ is made from a "no slump" concrete mix. Made under extreme pressure and high frequency vibrations, Vintage Stone™ has a compressive strength greater than 8000psi, a water absorption maximum of 5% and will meet or exceed ASTM C-936.

INSTALLATION

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material. Typically the base material is 4 in. to 8 in. (101mm to 202mm) in depth of compacted base for light vehicular and pedestrian traffic or as otherwise directed by Site Engineer/Architect/Landscape Architect.
2. Place bedding course of washed sand conforming to the grading requirements of ASTM C-33 to a uniform depth of 1-1 1/2 in. (25-38mm) screeded to the grade and profile required.
3. Install Vintage Stone™ with vertical side joints approximately 1/8 in. (3mm) in width.
4. Where required, cut pavers with an approved cutting device to fit accurately, neatly and without damaged edges.
5. Tamp pavers with a plate compactor, uniformly level, true to grade and free of movement.
6. Spread sand to 1/8 in. thickness over entire paving area. Stabilization of jointing sand may be required.
7. Make one more pass with plate compactor to fill joints with sand.

Complete installation & specification details are available by contacting your Pavestone Company Sales Representative.

Note: Colors are shown as accurately as possible in brochures & samples, but due to the nature of the product, regional color differences and variables in print reproduction, colors may not match exactly. For best results in maintaining color consistency, pavers must be installed from several cubes at a time. Efflorescence, a whitish, powder-like deposit, may appear on concrete pavers. This is a natural occurrence in any concrete product and will usually wear off over time.
